

# Christo Riser Door Lock & Keyhole Options

## SLIK: Fully Concealed Invisible Keyhole

**Square Drive 'T'-key operates the lock.** This is the most discreet option with the **keyhole concealed** behind a spring loaded flap. This covers the keyhole when the key is withdrawn: the **SLIK** system. Deadlocks are withdrawn first with the top and bottom locking mechanism and finally the latch.

## Euro-Cylinder Only

**The Euro-Cylinder key operates the lock.** With only the **Euro-Cylinder** visible, the **Euro-Cylinder** key opens the door. The last turn of the key operates the latch.

## Euro-Cylinder & SLIK (main image)

The most popular option, as handles are rarely fitted to flush fitted doors.

## Double Doors

No visible locks to the passive leaf.

## SLIK+ (see inset)

As above but with the **Square Drive** keyhole and **Euro-Cylinder** concealed behind a flap that lies flush with the door face: the **SLIK+** system. The **SLIK+** flap is held shut with a magnet and requires a flat edge to pop the flap open. The **SLIK+** flap is not designed to be used as a handle but can be replaced if damaged.
